Fall 2026 - CSI 3150
In Class Live Sprint Assignment 1

See instructions in the following slides

Time – 1 hour 15minutes (Starting at 1 PM)

Learning Outcomes

The goal of this assignment is to evaluate students on their ability to:

- Code a correct semantic HTML doc for the given problem
- Code a correct CSS doc for the give problem
- Code a correct JS file for the give problem
- Correctly attach external CSS and JS files to the HTML Doc
- Correctly layout HTML components and style them using CSS
- Interact with HTML nodes using JS and dynamically manipulate them based on reaction to User interactions on the webpage without any console errors
- Correctly use Git and Github at an introductory level and share their codebase for evaluation

All done within a time-constrained environment to mimic real-world coding interview screening rounds.

Scope of the assignment and restrictions

- The content of the assignment only covers the topics that has been demo-ed in class and topics that students have covered in their take home assignments.
- The outcome of this assignment can be achieved through multiple routes. Your focus should be on “making the product work” and not “making the product in one particular way”.
- **Resources permitted** (If it is not in the following list, then it is not allowed):
  - Lecture Demo codebase
  - Student Take Home assignments codebase
  - Cheatsheets shared by the instructors for HTML, CSS, JS
  - MDN documentation site for HTML, CSS, and JS

Problem Statement

- Develop an dynamic and interactive interface using HTML, CSS, and JS that will allow users to view/hide certain animal images.
- The next slides contains the step by step instructions of the interface layout.

On initial page load (orange borders are for your wireframing reference only and need not be a part of your final product)

Welcome to the Interactive Reveal What's that Animal UI

Click on the buttons below to reveal the animal images

Reveal a CAT

Reveal a DOG

Reveal a COW

Once a user clicks on any letter element

Welcome to the Interactive Reveal What's that Animal UI

Click on the buttons below to reveal the animal images

Hide Result

Reveal a CAT

Reveal a DOG

Reveal a COW

Similarly as other letter buttons are clicked…

Welcome to the Interactive Reveal What's that Animal UI

Click on the buttons below to reveal the animal images

Hide Result

Reveal a CAT

Hide Result

Reveal a DOG

Hide Result

Reveal a COW

If the hide result element is clicked then the state of that display will go back to the original on load state for that letter

Welcome to the Interactive Reveal What's that Animal UI

Click on the buttons below to reveal the animal images

Hide Result

Hide Result

Reveal a CAT

After clicking hide result btn for a cat

Reveal a DOG

Same functionality for dog and cow.

Reveal a COW

Penalty Rubric (Total: 50 points)

- The images to be used are provided with your assignment as an attachment.
- The orange boxes in the slides are given for your guidance for wireframing the webpage. It does not need to be part of the final product that you develop and render.
- Your HTML file must make use of HTML semantic tags wherever appropriate.
  - If entire HTML file has no semantic tags anywhere -> -7 points
- The layout of the interface must match as closely as possible to what is shown here in the instructions. However, how you color them, size them, etc that is upto you to determine.
  - You will lose 7 points if layout does not match exactly as shown in the instructions.
- If the JS functionality is not supported at all
  - you will lose 12 points.
- If partial JS support is present (works for one but not for all; OR JS code has errors but attempt has been made in the RIGHT direction)
  - you will lose 6 points.
- If you are unable to code, then describe the missing portion of the code as accurately as possible (as an algorithm) to receive upto 60% of the points for that task in your HTML file using <p> tags. Note, vague, unclear descriptions will be penalized within this 60%.
- Submit your assignment as a single pdf file containing one link for your github repo
  - If github repo link is broken -> -15 points and opportunity to resubmit for total of 35 points.
  - Your Github repo must consists of the following three files: index.html ; styles.css ; app.js

Grading Rubric

- Git and Github usage: 10 points
- HTML done right: 10 points
- CSS done right: 10 points
- JS done right: 20 points
